245	EAS 369:2005	1	Crystalline silicon photovoltaic array-on-site measurement of I-V characteristics	2005	This East African Standard describes procedures for on-site measurement of crystalline silicon photovoltaic (PV) array characteristics and for extrapolating these data to Standard Test Conditions (STC) or other selected temperatures and irradiance values. Measurements of PV array I-V characteristics under actual on-site conditions and their extrapolation to Acceptance Test Conditions (ATC) can provide (see annex A and QC 001002): data on power rating; verification of installed array power performance relative to design specifications; detection of possible differences between on-site module characteristics and laboratory or factory measurements; detection of possible performance degradation of modules and arrays with respect to on-site initial data. For a particular module on-site measurements extrapolated to Standard Test Conditions (STC) can be directly compared with results previously obtained in laboratory or factory for that module, provided that in both measurements the reference devices have the same spectral and spatial response as described in the relevant IEC 60904. Data from on-site array measurements contain diode, cable and mismatch losses. Therefore, they are not directly comparable to the sum of the respective module data. If a PV array is formed with sub-arrays of different tilt, orientation, technology or electrical configuration, the procedure described here will be applied to each unique PV sub-array.	27.16	8518;8519;8521;8522;8526;8527;8528	19				EASC/TC 052 Energy Resources

This East African Standard covers requirements for photovoltaic systems intended for use on buildings such as domestic, school, office and industrial building, and whose total output power does not exceed 12000 peak watts. This specification gives the requirements for: the components for photovoltaic systems as optimized for system sizes based on 12 V dc; and for the installation, commissioning, operation, inspection, monitoring and maintenance requirements for such systems. Typical sizes of photovoltaic systems for SHS are given in annex A of this standard. This standard emphasizes the optimization and functionality of the system with an in-built safety aspect at every stage.*	*27.160*	8504.40.00; 8504.40.10; 8507.20.00; 8507.30.00; 5807.40.00; 8507.80.00; 8541.40.00; 8541.40.11;; 8539.21.00; 8539.31.00; 8539.31.10; 8539.31.92	*40*	Energy And Heat Transer Engineering	Solar energy engineering		EASC/TC 052 Energy Resources

The scope includes pipes (collectively referred to as "jacking pipes") intended to be installed by pipe jacking, microtunnelling or other trenchless technology. This part of EAS 426 specifies complementary requirements to those in EAS 419 for unreinforced and reinforced concrete pipes and fittings, as provided for in that European Standard, with nominal sizes not exceeding DN 1500 for circular pipes with base and WN/HN 800/1200 for egg-shaped pipes. Full requirements for reinforced concrete circular trench and jacking pipes with nominal sizes greater than DN 1750, but not exceeding DN 3000, are also specified.*	*91.100.30*	6810.19.00; 6810.91.02	*15*	Construction Materials And Building	Construction materials	Concrete and concrete products	EASC/TC 021Building and Construction materials and general construction

The intended use of EAS 418 is to permit access to, and to allow aeration of, drain or sewer systems for the conveyance of sewage, rainwater and surface water under gravity or occasionally at low head of pressure, mainly installed in areas subjected to vehicular and/or pedestrian traffic. This part of EAS 426 specifies complementary requirements to those in EAS 418 for unreinforced and reinforced concrete manholes of circular and rectangular cross-section (with or without chamfered or rounded corners), as provided for in that European Standard, i.e. units with nominal sizes or nominal lengths not exceeding DN 1250 or LN 1250, respectively. Full requirements for unreinforced and reinforced concrete manholes with nominal sizes greater than DN 1250, but not exceeding DN 3000, are also specified. The manholes are intended to be installed in carriageways of roads (including pedestrian streets), hard shoulders and parking areas for all types of road vehicles, though provision is also made for units subject to lighter traffic loading. Requirements for soakaways, landing slabs and corbel slabs are also specified. Steel fibre concrete manholes are not manufactured in the United Kingdom and so have been excluded from this part of EAS 426. The intended use of EAS 418 is to permit access to, and to allow aeration of, drain or sewer systems for the conveyance of sewage, rainwater and surface water under gravity or occasionally at low head of pressure, mainly installed in areas subjected to vehicular and/or pedestrian traffic. This part of EAS 426 specifies complementary requirements to those in EAS 418 for unreinforced and reinforced concrete inspection chambers of circular and rectangular cross-section (with or without chamfered or rounded corners), as provided for in that European Standard. This part also specifies requirements for inspection chamber units less than or equal to DN 1000 or LN/WN 1000/675 not exceeding 1 metre depth to invert. EAS 131-1: 2008	*2*	*Concrete — Specification*	*2008*	*This East African Standard applies to concrete for structures cast in situ, precast structures, and structural precast products for buildings and civil engineering structures. The concrete may be mixed on site, ready-mixed concrete or produced in a plant for precast concrete products. This standard specifies requirements for: the constituent materials of concrete; the properties of fresh and hardened concrete and their verification; the limitations for concrete composition; the specification of concrete; the delivery of fresh concrete; the production control procedures; the conformity criteria and evaluation of conformity. This East African Standard applies to concrete compacted to retain no appreciable amount of entrapped air other than entrained air. This standard applies to normal-weight, heavy-weight and light-weight concrete. Other East African Standards for specific products e.g. precast products or for processes within the field of the scope of this standard may require or permit deviations from this standard. Additional or different requirements may be given in further parts of this standard or in other specific East African Standards, for example: concrete to be used in roads and other trafficked areas; concrete using other materials (e.g. fibres); concrete with an upper aggregate size of 4 mm or less (mortar); special technologies (e.g. sprayed concrete); concrete for disposal of liquids and gaseous waste; concrete for vessels for storage of polluting substances; concrete for massive structures (e.g. dams); dry mixed concrete. 				unreinforced and reinforced concrete pipes and fittings, as provided for in that European Standard, with nominal sizes not exceeding DN 1500 for circular pipes with base and WN/HN 800/1200 for egg-shaped pipes. Full requirements for reinforced concrete circular trench and jacking pipes with nominal sizes greater than DN 1750, but not exceeding DN 3000, are also specified.								
EAS 426-2: 2006	*1*	*Concrete pipes and ancillary concrete products - Part 2: Specification for unreinforced and reinforced concrete manholes and soakaways*	*2006*	*EAS 418 specifies requirements and describes test methods for precast concrete manholes of circular, rectangular (with or without chamfered or rounded corners) or elliptical cross-section, unreinforced, steel fibre and reinforced, with nominal sizes or nominal lengths not exceeding DN 1250 or LN 1250, respectively. The intended use of EAS 418 is to permit access to, and to allow aeration of, drain or sewer systems for the conveyance of sewage, rainwater and surface water under gravity or occasionally at low head of pressure, mainly installed in areas subjected to vehicular and/or pedestrian traffic. This part of EAS 426 specifies complementary requirements to those in EAS 418 for unreinforced and reinforced concrete manholes of circular and rectangular cross-section (with or without chamfered or rounded corners), as provided for in that European Standard, i.e. units with nominal sizes or nominal lengths not exceeding DN 1250 or LN 1250, respectively. 				specified. The manholes are intended to be installed in carriageways of roads (including pedestrian streets), hard shoulders and parking areas for all types of road vehicles, though provision is also made for units subject to lighter traffic loading. Requirements for soakaways, landing slabs and corbel slabs are also specified. Steel fibre concrete manholes are not manufactured in the United Kingdom and so have been excluded from this part of EAS 426. EN 752-2, -3 and -4, EN 1295-1 and EN 1610 deal with the planning, design, installation and testing of drains and sewers								
EAS 426-3: 2006	*1*	*Concrete pipes and ancillary concrete products - Part 3: Specification for unreinforced and reinforced concrete inspection chambers*	*2006*	*EAS 418 specifies requirements and describes test methods for precast concrete inspection chambers, designed to be used for inverts not exceeding 2 metres deep, of circular, rectangular (with or without chamfered or rounded corners) or elliptical cross-section, unreinforced, steel fibre and reinforced, with nominal sizes or nominal lengths not exceeding DN 1250 or LN 1250, respectively. The intended use of EAS 418 is to permit access to, and to allow aeration of, drain or sewer systems for the conveyance of sewage, rainwater and surface water under gravity or occasionally at low head of pressure, mainly installed in areas subjected to vehicular and/or pedestrian traffic. 				unreinforced and reinforced concrete inspection chambers of circular and rectangular cross-section (with or without chamfered or rounded corners), as provided for in that European Standard. This part also specifies requirements for inspection chamber units less than or equal to DN 1000 or LN/WN 1000/675 not exceeding 1 metre depth to invert. The inspection chambers are mainly intended for installation in areas outside the highway and where vehicle loading is restricted.

This specification gives the requirements for: the components for photovoltaic systems as optimized for system sizes based on 12 V dc; and for the installation, commissioning, operation, inspection, monitoring and maintenance requirements for such systems. Typical sizes of photovoltaic systems for SHS are given in annex A of this standard. This standard emphasizes the optimization and functionality of the system with an in-built safety aspect at every stage.*	*27.160*	8504.40.00; 8504.40.10; 8507.20.00; 8507.30.00; 5807.40.00; 8507.80.00; 8541.40.00; 8541.40.11;; 8539.21.00; 8539.31.00; 8539.31.10; 8539.31.92	*40*	*Electrical Engineering*	Solar energy engineering		EASC/TC 052 Energy Resources

				grid-connected, or as hybridised with non-PV power sources such as engine generators and wind turbines. This standard may not be applicable to small standalone systems due to the relatively high cost of the measurement equipment.								
EAS 369:2005	*1*	*Crystalline silicon photovoltaic array-on-site measurement of I-V characteristics*	*2005*	*This East African Standard describes procedures for on-site measurement of crystalline silicon photovoltaic (PV) array characteristics and for extrapolating these data to Standard Test Conditions (STC) or other selected temperatures and irradiance values. Measurements of PV array I-V characteristics under actual on-site conditions and their extrapolation to Acceptance Test Conditions (ATC) can provide (see annex A and QC 001002): data on power rating; verification of installed array power performance relative to design specifications; detection of possible differences between on-site module characteristics and laboratory or factory measurements; detection of possible performance degradation of modules and arrays with respect to on-site initial data. For a particular module on-site measurements extrapolated to Standard Test Conditions (STC) can be directly compared with results previously obtained in laboratory or factory for that module, provided that in both measurements the reference devices have the same spectral and spatial response as described in the relevant IEC 60904. Data from on-site array measurements contain diode, cable and mismatch losses. Therefore, they are not directly comparable to the sum of the respective module data. If a PV array is formed with sub-*	*27.16*	8518;8519;8521;8522;8526;8527; 8528	*19*	Electrical Engineering			EASC/TC 052 Energy Resources	

				arrays of different tilt, orientation, technology or electrical configuration, the procedure described here will be applied to each unique PV sub-array.								
EAS 120-1: 2006	*2*	*Lead acid starter batteries — Specification — Part 1: General requirements*	*2006*	*This standard is applicable to lead-acid batteries with a nominal voltage of 12 V. used primarily as a power source for the starting of internal combustion engines, lighting and also for auxiliary equipment of internal combustion engine vehicles. These batteries are commonly called "starter batteries". Batteries with a nominal voltage of 6 V are also included within the scope of this standard. All referenced voltages have to be divided by two for 6 V batteries: This standard is applicable to batteries for the following purposes: batteries for passenger cars; batteries for commercial and industrial vehicles for normal use; and batteries for commercial and industrial vehicles for severe use. This standard is not applicable to batteries for other purposes, for example, the starting of railcar internal combustion engines.*	*29.220.20*	8507.10.80	*18*	Electrical Engineering	Battries		EASC/TC 054 Electrical appliances, machines, and equipment	Starter Batteries

Since other methods of fastening the batteries are at present in use, two alternative admissible means are also specified.The object of the present standard is to specify; the main dimensions of starter batteries of four standard series; the location of the positive and negative terminals with respect to the fastening system; the dimensions of tapered terminals of starter batteries; and the marking of the polarity*	*29.220.20*	8507.10.80	*22*	Electrical Engineering	Battries		EASC/TC 054 Electrical appliances, machines, and equipment	Starter Batteries
